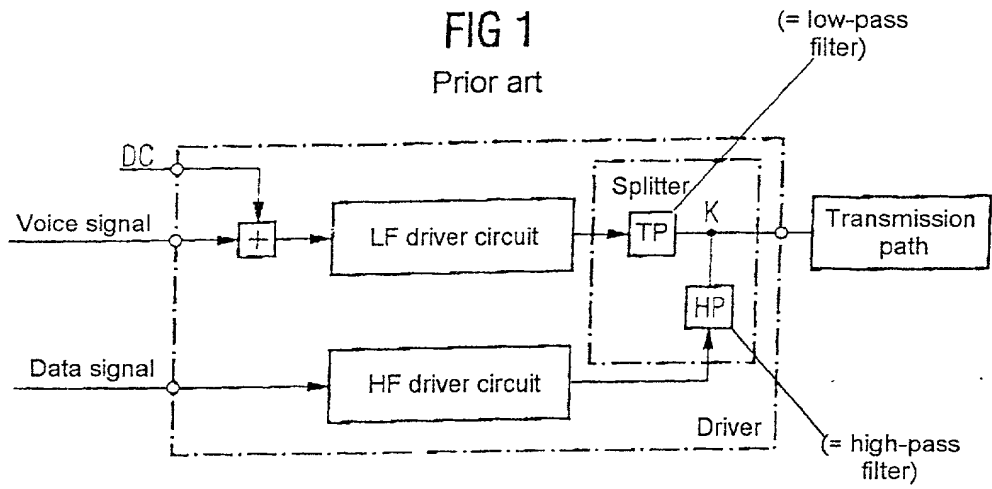

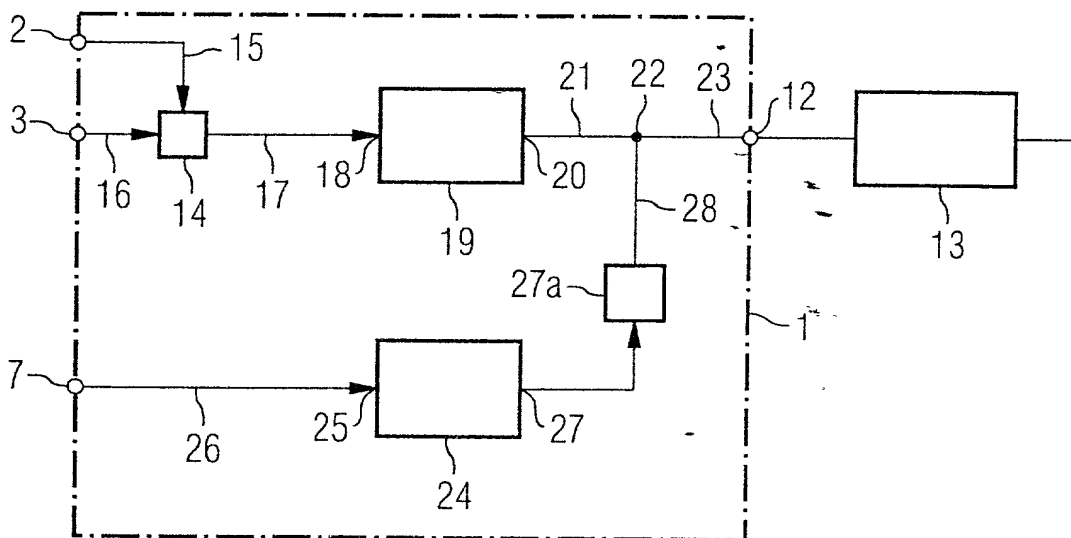

FIG 2

[illegible]

Figure 4 is a graph showing the logarithm of the maximum number of active nodes, $Z_{\text{aus}}(\log)$, versus the logarithm of the frequency, $f(\log)$. The curve is piecewise linear, starting at R_{37} for $f < f_U$, increasing linearly between f_U and f_0 , and then remaining constant at R_{29} for $f > f_0$.
